A NEW GENERATION IN HEATING

INFINITI 1000 CLASSIC FLUE-LESS GAS FIRE WITH EXTRA WIDE BLACK FRAME

These units have a steel firebox c/w with a standard 40mm thick black frame. The firebox gets built into your masonry wall. On completion of building, the grate style chosen, as well as any of the 6 optional trims, can be easily fitted to the firebox. This gives considerable versatility to the unit in enabling a wide range of looks

to suit each person's individual style. Perfect for the developer, who can build in a standard firebox and later customise this to each purchaser's choice as the units are sold.

The units are available in 700 or 1000mm sizes.
