A NEW GENERATION IN HEATING

WOOD INSERTS TO CONVERT EXISTING BUILT-IN JETMASTER UNIVERSALS

These Infiniti inserts are designed to easily convert existing built in Jetmaster units to high efficiency wood stoves. By using a cutting torch or plasma cutter to cut away the unwanted internal parts of the existing Jetmaster, enough space is created, that you are able to slide our insert into the external remains of the Universal.

Our steel frame covers up to the external dimensions of the existing Universal frame to give a tidy fit. This means that our insert can be completely installed in less than a day without any damage or re-work to the walls around the existing universal. This saves a lot of dust and disruption to the room as well as minimising the costs of changing to our powerful heat output insert.

NEW FEATURES

APPLICABLE TO OUR 14 & 18 KW SINGLE SIDED UNITS

1 TOUCH AIR CONTROL

This single air control is located at the bottom of the door, where it is much cooler to the touch. It easily adjusts air flow in the correct proportions to the top, rear and base of the stove, to maximise efficiency and ensure clean burning - making these units much simpler to use than many other wood stoves.

AIR INLET RESTRICTOR

Easily set to prevent over burning when installed with a long chimney or in high wind areas.

CHOICE OF GLASS

Choice of a Clear Glass at the rear of the door or a Black Border Glass located at the front of the door, for a more sophisticated look.

INSERT BEING SLID INTO
700 DOUBLE SIDED UNIVERSAL
